Dynamic Leverage Schedule

Last Updated: October 2026

Dynamic Leverage Schedule — Normal Conditions

The following schedule outlines the maximum leverage available for Standard and Cent Accounts at each equity tier. Instrument-specific conditions and temporary market risk controls may result in lower leverage.

Standard Account (USD)	Leverage
<1,000	1:2000
1,001-5,000	1:1000
5,001-10,000	1:500
10,001-20,000	1:400
20,001-30,000	1:300
30,001-50,000	1:200
50,001-100,000	1:100
>100,001	1:50

Cent Account (USC)	Leverage
<50,000	1:2000
50,001-100,000	1:1000
100,001-200,000	1:500
200,001-300,000	1:400
300,001-400,000	1:300
400,001-500,000	1:200
500,001-1,000,000	1:100
>1,000,001	1:50

NOTE: USC refers to US cents. 100 USC is equivalent to 1 USD.

Changes in account equity may result in a change to the applicable leverage tier and a recalculation of the margin requirements for both existing and new positions.

News Leverage Profile

High-impact economic releases and other market events can increase volatility and reduce liquidity. During these periods, leverage for new positions may be temporarily capped at 1:200, while accounts with lower applicable leverage will retain their current leverage levels.

Leverage adjustments may apply from 10 minutes before to 10 minutes after standard high-impact releases, and 30 minutes before to 30 minutes after major market-moving events. For live events, including speeches, testimony and press conferences, restrictions may remain in effect until the event concludes or longer where market conditions require.

Normal Profile	News Profile – New Positions
1:2000	1:200
1:1000	1:200
1:500	1:200
1:400	1:200
1:300	1:200
1:200	1:200
1:100	1:100
1:50	1:50

Positions opened before a news-related adjustment are generally unaffected. In exceptional circumstances, additional risk measures may also apply to existing positions.

Weekend Leverage Profile / Market Open & Close

Market openings, closings and weekend transitions (risk windows) may involve reduced liquidity and increased price-gap risk. During the periods shown below, new positions in all instruments, including FX, metals, commodities and indices, may be subject to maximum leverage of 1:100. Additional instrument-specific restrictions may apply.

Risk Profile	All Instruments
Normal conditions	Applicable normal profile, subject to other restrictions
Risk windows	New positions may be capped at 1:100

Risk Profile	Risk Profile Time Window
Daily market close	30 minutes before close
Daily market open	30 minutes after open
Monday market open	First 2 hours after open

Trading hours vary by instrument. Applicable risk windows follow platform server time unless otherwise stated. Additional restrictions may apply during holidays, periods of low liquidity or abnormal market conditions.
